

Tiger Software Suite

System Requirements: Current Windows operating systems

Hardware Requirements:

Minimum Processor: Pentium or equivalent

Storage Requirements: 64 MB

Memory Requirements: 500 MB

Languages Supported: Supports a total of 55+ languages for braille translation and/or user interface localization

Included Software and Features in the Tiger Software Suite Package:

- **Word and Excel Add-In:** Quickly translate text to braille and convert images to tactile graphics using the Tiger tab in Microsoft Word and Excel.
- **Tiger Designer:** Utilize your embossers 8 dot heights to edit and generate world-class tactile graphics.
- **Quick Paw:** 6/8 key braille entry.
- **ViewPlus Translator:** The translator can convert your text into braille based on your preferred settings.
- **Pattern Editor:** Create tactile patterns to represent color in embossed output.

The Tiger Software Suite (TSS) (developed by ViewPlus) powers all our embossers, from the small portable EmBraille to our high-volume/high-speed Elite. Though printing to ViewPlus embossers is possible without the need of special software due to the standardized Windows printer driver that is free with every embosser, TSS offers multi-language braille translation and document formatting in Microsoft Word or Excel to mix braille and tactile graphics.

Tiger Designer

TSS also includes Tiger Designer, a stand-alone software program that enables anyone to create and edit print files for ViewPlus embossers. Using Tiger Designer, it is easy to add braille labels or clean up and edit tactile graphics. The Pattern Editor included in Tiger Designer allows for the creation of tactile patterns which can be automatically mapped to specific colors when embossing, or applied manually with the Pattern Fill tool. Utilizing visualization of the embossed output on the screen, Tiger Designer also provides easy tools to create tactile graphics from scratch.

Save files in PRN or TDSX format so now the Rogue can print any file – fast (faster to print VP Max PRN files), cut sheet or continuous feed *and* with the tightest dot placement to obtain smooth curves with multiple dot heights.

ViewPlus Formatter

Quickly translate text to braille and convert images to tactile graphics using an add-in to Microsoft Word and Excel. The VP Formatter provides expert level output with easy-to-use controls. With the VP Formatter you can emboss your document as seen on the screen with a single click of the mouse. For maximum control generate unlimited custom settings and reload them anytime with the touch of a button.

ViewPlus Translator

Have a PowerPoint or a text file? How about a website or other Windows application? The VP Translator can convert your text into braille based on your preferred settings then quickly send your document to your ViewPlus embosser.
